

New Media100 Lab: Assignment 5

Objective:

Use iMovie to edit your video clips into a 1-minute movie.

Purpose:

As a videographer, this exercise presents an opportunity to practice using iMovie to edit your video footage.

Process:

Using iMovie, create a 1-minute movie.

- 1.Import your footage into iMovie.
- 2.Create a new project and name it LastnameFirstname_Assignment5.
- 3.Watch your clips in the event library and make selections using the selection tools- (star, unmark and x).
4. Move the clips you selected into the project window and rearrange them as desired.
5. Adjust the length of each clip using the clip trimmer.
- 6.Adjust the color temperature, exposure, contrast, saturation etc... of your clips (when necessary or for creative expression- at least 6 clips).
7. Apply a crop to at least 2 of your clips.
8. Add transitions and adjust their length.
9. Add beginning and end titles.
10. Re-adjust your time if necessary, so that your movie is exactly 60 seconds in length.

11. Export the movie via Quicktime (located in the Share menu).

Submit:

Submit a 1-minute finished movie following all of the above steps.

Name your file in the following convention:

LastnameFirstname_Assignment5.mov

***Your assignment will not be accepted if you do not follow these naming conventions.**

Download your file to a **flash drive** and bring it to class.

Be prepared to discuss the choices you made and the steps you took to create this movie in class.
